Three CoE faculty members were to be inducted into the National Academy of Engineering (NAE). Russell Dupuis, an ECE professor, was awarded the Draper Prize this year for his work with LED lights. There is no Nobel Prize in engineering, but the Draper Prize is considered one of the preeminent awards recognizing engineers and contributions to technological advancement.

This announcement was soon followed by news that four CoE faculty members were to be inducted into the Coulter Academy of Engineering (CAE). Partha Unnava, a BME student who broke an ankle playing basketball and later invented a more comfortable crutch, has joined the CAE. Deepak Divan, ECE professor and OpEds by CoE Dean of Engineering Gary S. May, and WORTH W. Tiger Yeung have been selected for this honor.

These faculty members are part of a community of more than 400 dedicated teachers and researchers in the College who are committed to educating students and engaging in research, and whose scholarship is being recognized worldwide.

We can all take great pride in their work and in the recognition they bring to the College. As always, thank you for your support of the College.

Sincerely,
Gary S. May, Dean
