Dear Friends of the College:

Recent weeks have brought a flurry of rankings from various news sources, all of which have been very good news for the College of Engineering. There is a lot of data out there about how various engineering programs and their graduates perform in the real world. And any ranking that interests you is likely to include the results of at least one of these areas.

George W. "Bert" Reynolds, Jr., a long-time supporter, writes:

"This week, the rankings are back again. As always, Tech's programs in mechanical, civil, electrical and computer engineering are among the top ranks in their respective areas. In another recent ranking, the time by business leader Georgia Tech students once again received the college the highest score for mid-career earnings. The college ranked No. 5 on a list that included MIT, Stanford, and Carnegie Mellon. The rankings were compiled by PayScale, a for-profit company based in Seattle, ranking the list with the help of American institute members. The only new American rankings released in the past few weeks are those for graduate programs in aerospace, biomedical, civil, environmental, materials, mechanical and chemical engineering. These were released by US News & World Report. The rankings were compiled by PayScale, a for-profit company based in Seattle, ranking the list with the help of American institute members.

How do you measure the success of a college education? PayScale is just one of many factors that influence the rankings of colleges and universities based on mid-career and alumni earnings. Georgia Tech is always high for the career your investment."
